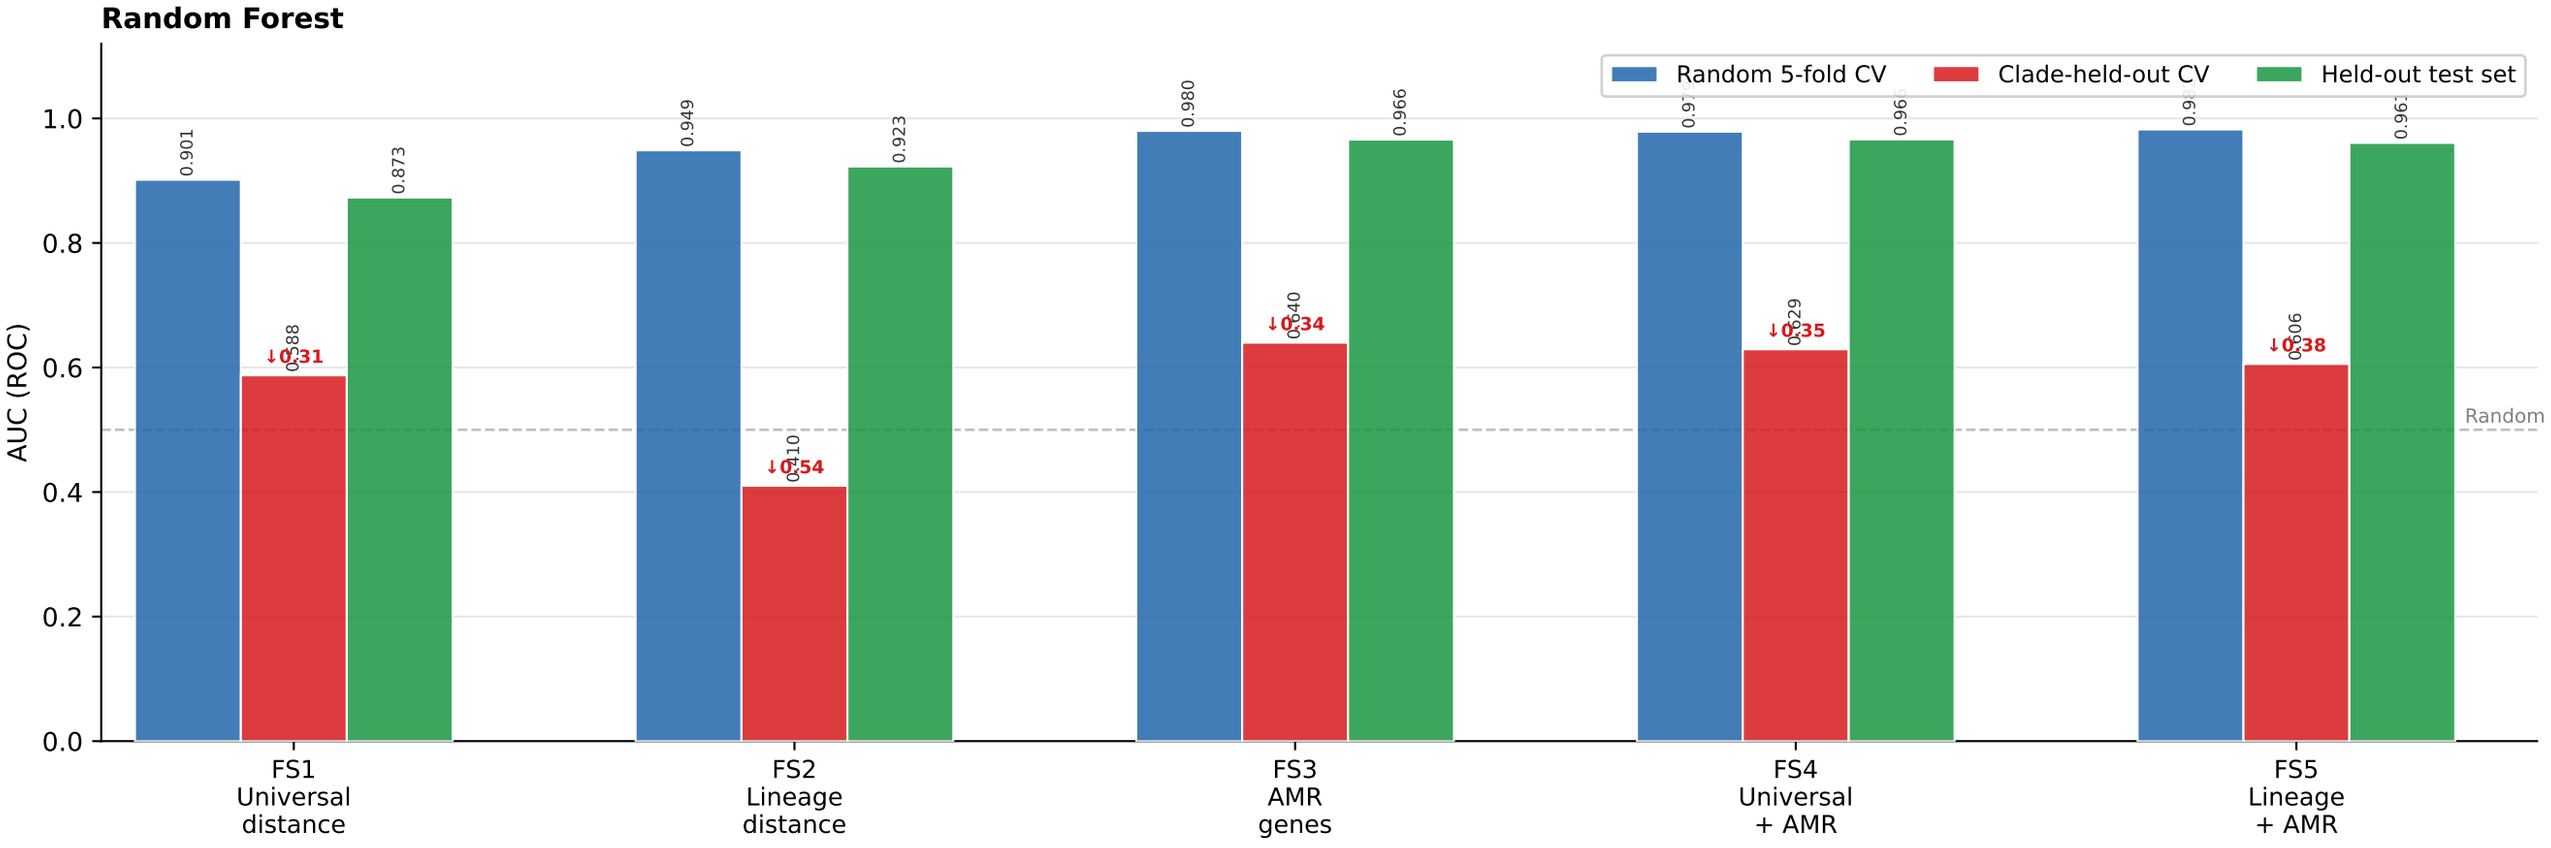
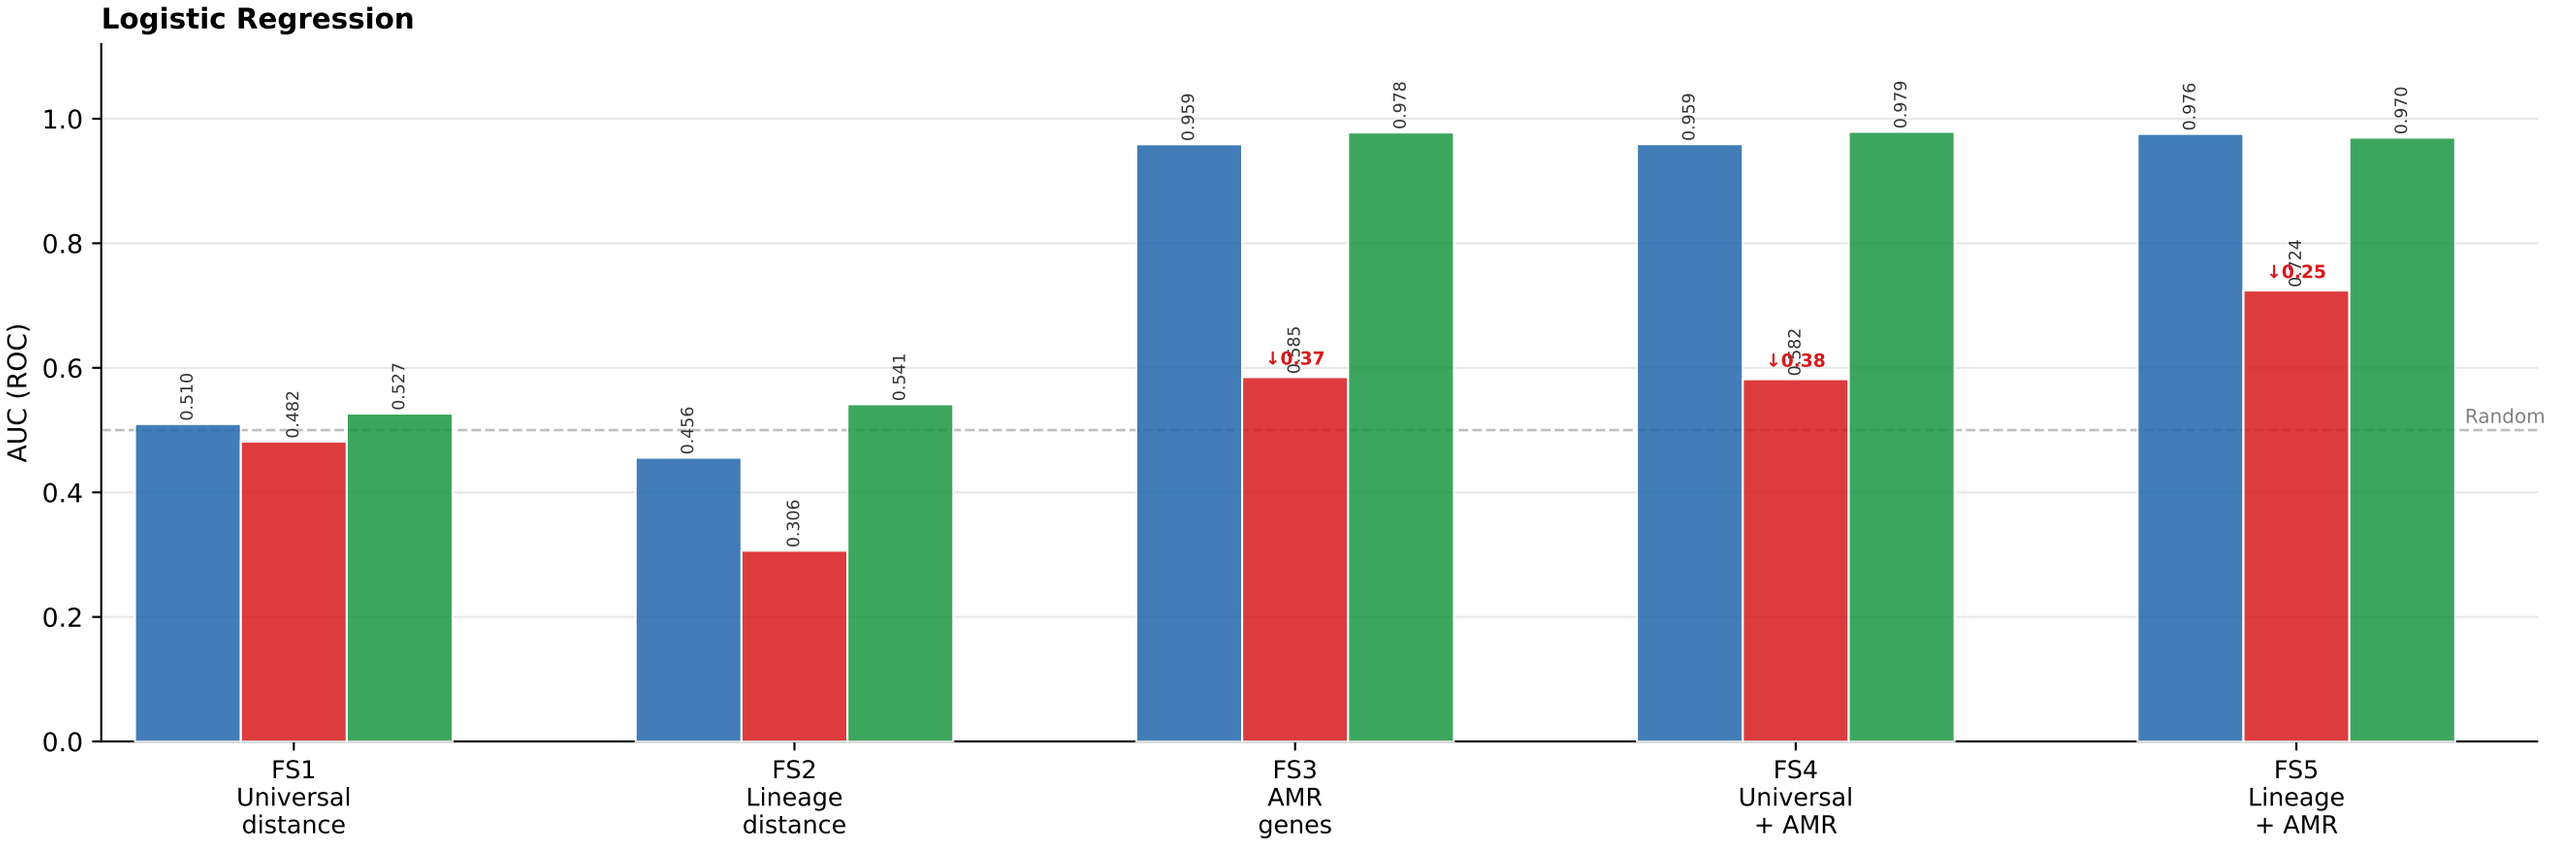
Imipenem Resistance Prediction Performance Across Feature Sets and Evaluation Strategies

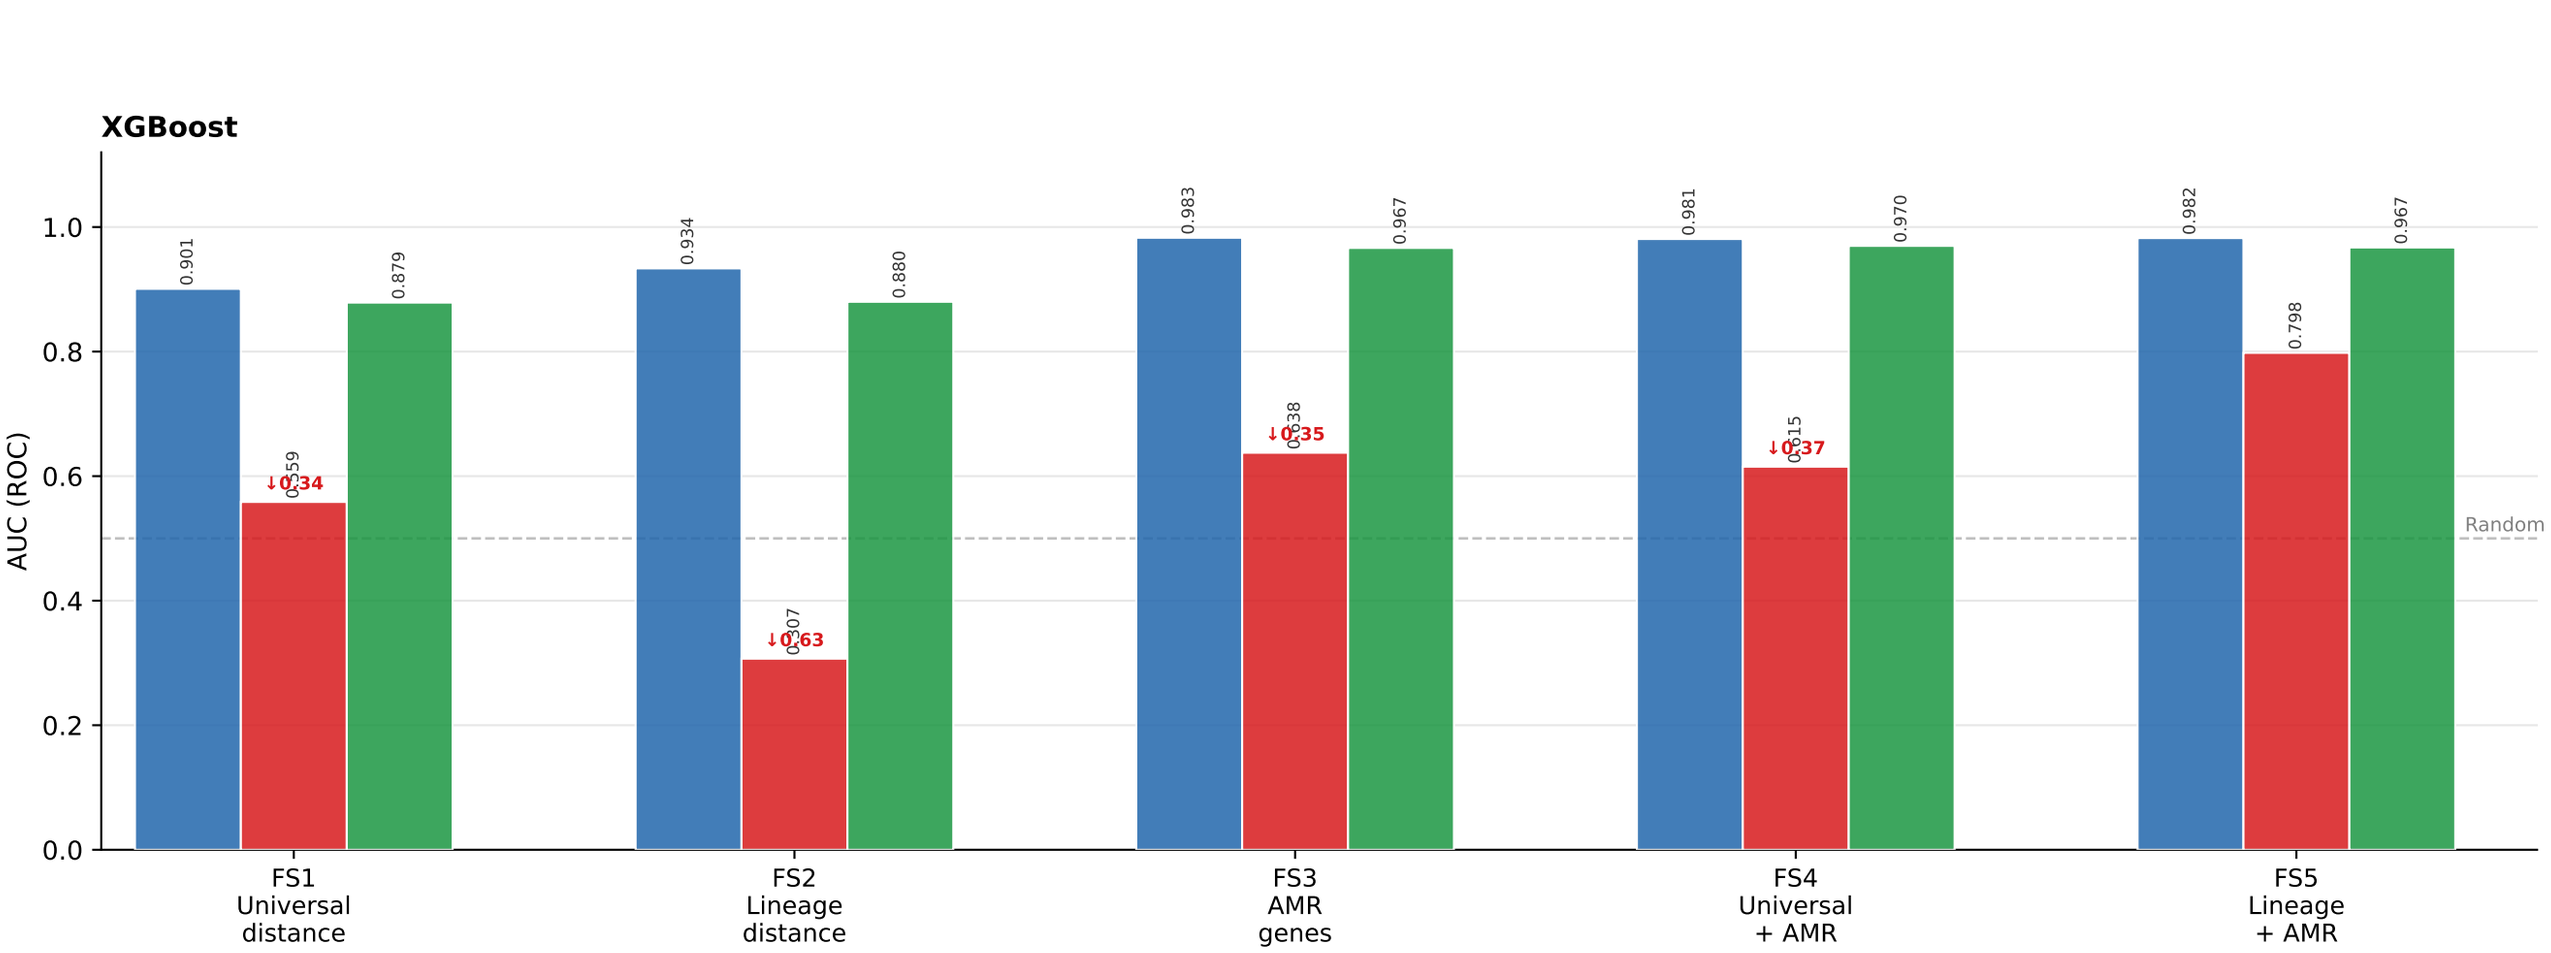
Random Forest



Logistic Regression



XGBoost



FS1: Universal phylogenetic distance from ATCC 19606 (n=770) | FS2: Lineage-matched distance from ST-specific susceptible reference (n=577) | FS3: AMR gene presence/absence (228 genes, n=770)
FS4: Universal distance + AMR genes (n=770) | FS5: Lineage-matched distance + AMR genes (n=577)
